

The Sunboot

Seasonal Cover

The Sunboot is made from your choice of acrylic fabric from the Sunesta fabric collection. It is designed to cover and protect any of our Sunesta awning models when they are retracted for extended periods of time. The Sunboot will help to protect your awning from inclement weather, dirt and animals, and extend the life of your awning.

The Sunboot is made as a complete fabric cover to be placed over the retracted awning. It will have an opening running down the entire width that can be closed with Velcro after placing over the retracted awning. In addition, we recommend using at least two Velcro straps to help secure the Sunboot in place.

1. Specify if the Sunboot is for:
 - A. Sunesta, Sunlight or Sunflair
 - B. Sunesta Smartfold or Sunlight SmartTilt
 - C. Sundrop
2. For A and B, you must add 6 inches in addition to the awning width.
3. Determine the number of Velcro straps needed, based on the chart to the right.
4. You may choose any Sunesta acrylic fabric.
